

Ethan Warren

San Francisco, CA | ethan@example.com | github.com/ethanjameswarren

Summary

Staff analytics engineer and platform builder with deep experience designing data-intensive systems, leading cross-functional technical initiatives, and turning ambiguous business problems into reliable production capabilities. Strong bias toward clarity, ownership, and evidence-backed impact.

Skills

Python, SQL, dbt, Snowflake, BigQuery, Airflow, Dagster, AWS, Azure, Docker, Kubernetes, FastAPI, Streamlit, Tableau, Looker, probabilistic modeling, forecasting, distributed systems, platform architecture, data modeling, MLOps.

Experience

Staff Analytics Engineer | Insight Data Corp

2022 – Present

Remote

- Designed and shipped a self-serve metrics platform that reduced time-to-answer for executive requests from days to minutes, serving 200+ internal users.
- Led architecture for a real-time anomaly detection pipeline processing 5M events per day, cutting false-positive incident response by 40%.
- Drove cross-functional alignment between data, product, and engineering to standardize core business definitions across 12 source systems.
- Mentored senior engineers and established code-review and documentation standards for the analytics platform team.

Senior Data Engineer | Scale Systems Inc.

2019 – 2022

San Francisco, CA

- Rebuilt the revenue data pipeline from brittle nightly batch jobs into an incremental, tested dbt workflow, improving freshness from 24 hours to under 1 hour.
- Introduced automated data-quality checks and incident triage playbooks that reduced critical data outages by 60% over one year.
- Owned the technical roadmap for the data platform team and presented quarterly platform health reviews to engineering leadership.

Data Engineer | Acme Analytics

2016 – 2019

Oakland, CA

- Built the foundational data warehouse and reporting layer supporting the company's first enterprise-grade customer-facing analytics product.
- Implemented demand-forecasting models used by the operations team to optimize inventory across three regional distribution centers.

Selected Projects

Open-Source Water Dashboard | Personal Project

2024

- Released a public Streamlit dashboard aggregating California water-reservoir data, serving 10K+ monthly users and featured in a regional planning newsletter.

Education

BS Computer Science | University of California, Berkeley

2012 – 2016
